Package plarray v0.1i

Hironobu Yamashita

2021/12/11

This package plarray provides small patches to array package (latex-tools bundle) for use with Japanese pLaTeX/upLaTeX. By loading plarray in addition to/instead of array, you can avoid conflicts between (u)pLaTeX kernel and array\(^*1\).

If you are going to use both plex and array packages on pLaTeX/upLaTeX, the easiest way is to use plextarray; please refer to its document.

This package is part of platex-tools bundle:

https://github.com/aminophen/platex-tools

\documentclass{article} % if you are using pLaTeX,
\usepackage{plarray} % load this!
\begin{document}
\begin{tabular}{>{$}c<{$}|c|}
\hline
\exp(x) & \text{指数関数} \\
\hline
\log(x) & \text{対数関数} \\
\hline
\end{tabular}
\end{document}

\(^*1\) Below is recent changes introduced to plLaTeX/upLaTeX kernels by Japanese \TeX Development Community, which cannot cope with array package:

- Remove extra \textbackslash xkanjiskip around tabular environment
- Inhibit JFM (Japanese \TeX font metric) glue around tabular cell components

The package plarray re-adds these changes to array.
